Model Question-Set-A

Section A

Attempt any two questions. (2 × 10 = 20)

1. What is dynamic website? Write a PHP program to create a web form that contains a textbox for name, a textbox for age, check boxes for hobbies and a textarea for comments and a submit button. When a submit button is clicked, the following validations should be done.
   a.Name should be between 2 to 10 characters and should contain characters only.
   b. Age should be the numbers between 16 and 55.
   c.At least one hobby should be selected.
   d.Comment is required. [2+8]
2. Describe how can we retrieve form data? Write a function to calculate sum of all even numbers that occurs between given two integer passed as parameters. [2+8]
3. Why we use casting operators in php? Write with example? Differentiate for from foreach statement. Write PHP program to illustrate use of for and foreach in factorial of a number. [2+3+5]

Section B

Attempt any eight questions. (8 × 5 = 40)

4. How do you handle errors when parsing a CSV file in PHP? [5]
5. What are the different types of errors in PHP and how do you handle them? [5]
6. What is session? How do you retrieve session variables in PHP? [5]
7. How do you insert data into a MySQL table using a SQL query in PHP? [5]
8. What is the difference between a public, private, and protected property in a PHP class? [5]
9. Write a PHP program to concatenate two strings and display the result in uppercase. [5]
10. What is the use of str_replace() and isset() function in php?. [5]
11. Can you explain how to convert a PHP array into individual variables. [5]
12. A program to search for a pattern in a string using a regular expression. [5]

Model Question-Set-B

Group – 'A'

Attempt any TWO Question. [10 x 2 = 20]

1) Prepare a form that should contain text box for name, address and email, selection list for country. Write a server side script to store data from the form into database. The script should contain connection to database and appropriate query into the database. (10)
2) Differentiate between GET and POST method. How these two methods of data submission is handled in PHP? Explain with example (3+2+5)
3) What is PHP encoding functions? WAP to simple text searching using PHP string function. How can we decompose the URLs in PHP? (2+4+4)

Group – 'B'

Attempt any EIGHT Questions. **[8 x 5 = 40]**

4) Define Scripting language. Explain about the types of operators use PHP with example.(1+4)
5) Define Anonymous Function in PHP. WAP to define an anonymous function called $addition that takes two arguments and returns their sum.(1+4)
6) Define session and cookie in PHP. Differentiate between session and cookie with example.(1+4)
7) Define array and string. Create associative array of size seven and display the contents in descending order of key.(1+4)
8) Why file handling concept is used in PHP? Explain fwrite(), unlink() and fread() function with examples.(1+4)
9) What do you mean by Exception in PHP? Explain any two PHP built-in functions for Exception handling with example.[1+4]
10) Define Anonymous class in PHP. How can we create simple ***index.php*** form in PHP.[1+4]
11) What is HTTP authentication in PHP? WAP to simple HTTP authentication in PHP.[1+4]
12) What is JSON file in PHP? Explain the use of ***file_get_contents()*** in JSON with example.(1+4)

Model Question-Set-C

Group – 'A'

Attempt any ONE Question. **[10 x 1 = 10]**

1) Create web form for book search catalog. The form should contain a dropdown defining search type, a text box for search keyword, a radio button for download type true or false, now write PHP script to store data from the form into database table and also retrieve the results from stored table in a new page (10)
2) Define class and object in PHP. Write a PHP function that accepts list of countries and a search value as parameters and checks whether the search value is in the list or not. (2+2+6)
3) Write a PHP program to create a form that contains two textboxes that accepts numbers and a submit button. When a submit button is clicked, sum of two numbers will be displayed. (10)

Group – 'B'

Attempt any SIX questions. **[6 x 5 = 30]**

4) Define Scripting language. Explain about the types of variable use PHP with example.(1+4)
5) What is HTTP protocol? Explain about HTTP Request and Response with example.(1+4)
6) Define function in PHP. Explain about Variable Functions, Anonymous Functions, Date and Time functions in PHP.
7) Define string constant. How can we access the characters from given string.(1+4)
8) Differentiate between fetchAll() and getAll().(5)

9) Define Regular Expression in PHP. Differentiate between Indexed and Associative array in PHP.(1+4)
10) A program to validate a password using regular expressions. (5)
11) Are there any limitations or restrictions to consider when converting between arrays and variables? (5)
12) Write short notes on:
    a. Require vs include,
    b. Default function parameters
    c. String Manipulation in php

Model Question-Set-D

Group – 'A'

Attempt any ONE Question. **[10 x 1 = 10]**

1) Write a PHP program that reads CSV file which contains (itemld, itemDesc, rate, qty) and insert them into a database. Assumption can be made if required. Differentiate between mysql_fetch_assoc() and mysql_fetch_array(). (6+4)
2) Write php function that accepts username and password as argument and check credentials in user table which is stored in database if record found welcome the user with welcome message and if not found redirect user to the login page. Make your own assumptions about database. (10)
3) Differentiate between client side and server side validation. Write PHP code to perform server side validation. (check for empty, alphabets, numbers,email and password length validation). (10)

Group – 'B'

Attempt any SIX questions. **[6 x 5 = 30]**

4) Write a PHP program to create a multidimensional array that holds the cities of districts in Kathmandu valley such as Kathmandu (Newroad, Durbar Marg, Thanel), Lalitpur(Patan, Jawlakhel, Kupondole), Bhaktapur(Durbar square, suryabinayak). Then Display the contents of array.
5) How do you sort the data in a CSV file by a specific column in PHP? (5)
6) What is the difference between die () and exit () in PHP, and when would you use each one? (5)
7) What do you mean by register global variables? Describe server variable HTTP_USER_AGENT with an example.
8) Make following table using PHP.

Name	Age	Gender
R	21	M
A	20	F

9) Write a PHP program to display the contents of a database. Make your own assumptions abo database.
10) How do you use session cookies in PHP, and what are some potential security risks of using session cookies? (5)
11) How do you update data in a MySQL table using a SQL query in PHP? (5)
12) Why trim () function used in php? "Validations should be performed on both the client and server side". Why? (2.5+2.5)

Model Question-Set-E

Group – 'A'

Attempt any ONE Question. **[10 x 1 = 10]**

1) Write down the PHP script to display data from a database table to a web page in following format. Make your own assumption about database and table name. (10)

Id	Product name	Category	Brand	size

2) Write PHP source code to create multi-dimensional array. Write a PHP program to print the following List in array and display as follows.(4+6)

A. Bachelor in Information Management.
B. Bachelor in Business Administration.
C. Bachelor in Business Studies

3) Write a PHP program to read name and address from a database and display and also to copy content of one text file to another. (5+5)

Group – 'B'

Attempt any SIX questions. **[6 x 5 = 30]**

4) How do you write data to a CSV file in PHP? List any four register global variables.(2+3)
5) How will you display current date in a web page using PHP statement?(5)
6) Is it a good practice to use error suppression in PHP, and why or why not? (5)
7) Why file is used? Explain fgets(), fputs (), file_get_contents() and fread() function with examples.(1+4)
8) Write a PHP program to display the contents of a database. Make your own assumptions abo database.(5)
9) How do you use session cookies in PHP ? How do you delete data from a MySQL table using a SQL query in PHP? (1+4)
10) What is array padding? Give example. Write a PHP program to concatenate a string with a boolean value. (1+4)

11) What does mktime() function do? Create two integer arrays of size 5 each with data in them. Then display sum of all the number of both arrays. (2.5+2.5)
12) Write a program in PHP to store "coding in PHP" in a file named "coding.txt".(5)

Model Question(TU)

Section A

Attempt any two questions. (2 × 10 = 20)

1. What is a function? How can you define and call a function in PHP? Write a PHP program to implement a function with parameters and return value.[4+6]
2. How can you retrieve form data? Write a PHP program to create a form data that will take a Fahrenheit value as input and displays equivalent Celsius value on submit. The Celsius = (5/9)*(Farenheit-32).[4+6]
3. What are casting operators? Differentiate for from foreach statement. Write PHP program to illustrate use of for and foreach.[2+3+5]

Section B

Attempt any eight questions. (8 × 5 = 40)

4. Write a PHP program to parse a CSV file. [5]
5. Define error handling, error reporting and error suppression. [5]
6. What is session? Write a PHP program for maintaining user data with sessions. [5]
7. Write a PHP program to connect database and retrieve data from a table and display in a page.[5]
8. How can you define class and object in PHP. Illustrate with example. [5]
9. Write a PHP program that will read two input strings in variables fname and lname and display concatenation of fname and lname.[5]
10. How can you define variable in PHP. Illustrate with example. [5]
11. How conversion between array and variables is done? [5]
12. Write a PHP program to illustrate string patterns using regular expression. [5]

2023-QUESTION

BIT301-2079
Tribhuvan University
Institute of Science and Technology 2079
✡
Bachelor Level/Third Year/ Fifth Semester Bachelors in Information Technology (BIT 301)
Full Marks: 60
(Web Technology)
Pass Marks: 24

Time: 3 hours
Candidates are required to give their answers in their own words as for as practicable.
The figures in the margin indicate full marks.
Section A
Long Answer Questions
Attempt any TWO questions.
12 × 10-20]
1. What are variables? How can you define static variables? Write a PHP program to illustrate the use of Switch statement.
[2+3+5]
2. How can you store string type data in an array? Write a PHP program to illustrate use of extract and compact functions for conversion between arrays and variables, [3+7]
3. Consider you have a login form having username, password fields, login and cancel buttons. Now, write a PHP program for implementing login form. The login should be redirected to home.php upon successful login button event. The cancel button should clear the form field values upon its submission.
[10]
Short Answer Questions Attempt any EIGHT questions.
Section B
18×5=40]
4. How are comments written in PHP? Write a PHP program that will read your name and roll number and print the values. Label your program with appropriate comments.[1+4]
5. Write a PHP program that will contain a concat strings function. The function should have two arguments stl and st2 of type string and should return st3 which is concatenation of stl and st2.[5]
6. Write PHP program to extract subset of an array using array_slice() function. [5]
7. Describe an anonymous class using suitable example.
8. Write a PHP program for illustrating the starting and ending of session.[5]
9. How can you query a database in PHP?[5]
10. How can you retrieve the form data? Illustrate with example. [3+2]
11. What is the error handler? Write a PHP program to show use of error handler to format and print errors. [1+4]
12. For the following JSON file named BIT.JSON, write a PHP program to read information from this JSON file.
{
Name: "Gunadi", Email: "Gunadi@gmail.com" Dob: "January 1" Age: 30 }

END

BEST OF LUCK FOR UR EXAM
