Model Question-Set-A

Section A

Attempt any two questions. (2 × 10 = 20)

1. What is dynamic website? Write a PHP program to create a web form that contains a textbox for name, a textbox for age, check boxes for hobbies and a textarea for comments and a submit button. When a submit button is clicked, the following validations should be done.
   a.Name should be between 2 to 10 characters and should contain characters only.
   b. Age should be the numbers between 16 and 55.
   c.At least one hobby should be selected.
   d.Comment is required. [2+8]
2. Describe how can we retrieve form data? Write a function to calculate sum of all even numbers that occurs between given two integer passed as parameters. [2+8]
3. Why we use casting operators in php? Write with example? Differentiate for from foreach statement. Write PHP program to illustrate use of for and foreach in factorial of a number. [2+3+5]

Section B

Attempt any eight questions. (8 × 5 = 40)

4. How do you handle errors when parsing a CSV file in PHP? [5]
5. What are the different types of errors in PHP and how do you handle them? [5]
6. What is session? How do you retrieve session variables in PHP? [5]
7. How do you insert data into a MySQL table using a SQL query in PHP? [5]
8. What is the difference between a public, private, and protected property in a PHP class? [5]
9. Write a PHP program to concatenate two strings and display the result in uppercase. [5]
10. What is the use of str_replace() and isset() function in php?. [5]
11. Can you explain how to convert a PHP array into individual variables. [5]
12. A program to search for a pattern in a string using a regular expression. [5]

Model Question-Set-B

Group – 'A'

Attempt any TWO Question. [10 x 2 = 20]

1) Prepare a form that should contain text box for name, address and email, selection list for country. Write a server side script to store data from the form into database. The script should contain connection to database and appropriate query into the database. (10)
2) Differentiate between GET and POST method. How these two methods of data submission is handled in PHP? Explain with example (3+2+5)
3) What is PHP encoding functions? WAP to simple text searching using PHP string function. How can we decompose the URLs in PHP? (2+4+4)

Group – 'B'

Attempt any EIGHT Questions. **[8 x 5 = 40]**

4) Define Scripting language. Explain about the types of operators use PHP with example.(1+4)
5) Define Anonymous Function in PHP. WAP to define an anonymous function called $addition that takes two arguments and returns their sum.(1+4)
6) Define session and cookie in PHP. Differentiate between session and cookie with example.(1+4)
7) Define array and string. Create associative array of size seven and display the contents in descending order of key.(1+4)
8) Why file handling concept is used in PHP? Explain fwrite(), unlink() and fread() function with examples.(1+4)
9) What do you mean by Exception in PHP? Explain any two PHP built-in functions for Exception handling with example.[1+4]
10) Define Anonymous class in PHP. How can we create simple ***index.php*** form in PHP.[1+4]
11) What is HTTP authentication in PHP? WAP to simple HTTP authentication in PHP.[1+4]
12) What is JSON file in PHP? Explain the use of ***file_get_contents()*** in JSON with example.(1+4)

Model Question-Set-C

Group – 'A'

Attempt any ONE Question. **[10 x 1 = 10]**

1) Create web form for book search catalog. The form should contain a dropdown defining search type, a text box for search keyword, a radio button for download type true or false, now write PHP script to store data from the form into database table and also retrieve the results from stored table in a new page (10)
2) Define class and object in PHP. Write a PHP function that accepts list of countries and a search value as parameters and checks whether the search value is in the list or not. (2+2+6)
3) Write a PHP program to create a form that contains two textboxes that accepts numbers and a submit button. When a submit button is clicked, sum of two numbers will be displayed. (10)

Group – 'B'

Attempt any SIX questions. **[6 x 5 = 30]**

4) Define Scripting language. Explain about the types of variable use PHP with example.(1+4)
5) What is HTTP protocol? Explain about HTTP Request and Response with example.(1+4)
6) Define function in PHP. Explain about Variable Functions, Anonymous Functions, Date and Time functions in PHP.
7) Define string constant. How can we access the characters from given string.(1+4)
8) Differentiate between fetchAll() and getAll().(5)

9) Define Regular Expression in PHP. Differentiate between Indexed and Associative array in PHP.(1+4)
10) A program to validate a password using regular expressions. (5)
11) Are there any limitations or restrictions to consider when converting between arrays and variables? (5)
12) Write short notes on:
    a. Require vs include,
    b. Default function parameters
    c. String Manipulation in php

Model Question-Set-D

Group – 'A'

Attempt any ONE Question. **[10 x 1 = 10]**

1) Write a PHP program that reads CSV file which contains (itemld, itemDesc, rate, qty) and insert them into a database. Assumption can be made if required. Differentiate between mysql_fetch_assoc() and mysql_fetch_array(). (6+4)
2) Write php function that accepts username and password as argument and check credentials in user table which is stored in database if record found welcome the user with welcome message and if not found redirect user to the login page. Make your own assumptions about database. (10)
3) Differentiate between client side and server side validation. Write PHP code to perform server side validation. (check for empty, alphabets, numbers,email and password length validation). (10)

Group – 'B'

Attempt any SIX questions. **[6 x 5 = 30]**

4) Write a PHP program to create a multidimensional array that holds the cities of districts in Kathmandu valley such as Kathmandu (Newroad, Durbar Marg, Thanel), Lalitpur(Patan, Jawlakhel, Kupondole), Bhaktapur(Durbar square, suryabinayak). Then Display the contents of array.
5) How do you sort the data in a CSV file by a specific column in PHP? (5)
6) What is the difference between die () and exit () in PHP, and when would you use each one? (5)
7) What do you mean by register global variables? Describe server variable HTTP_USER_AGENT with an example.
8) Make following table using PHP.

Name	Age	Gender
R	21	M
A	20	F

9) Write a PHP program to display the contents of a database. Make your own assumptions abo database.

10) How do you use session cookies in PHP, and what are some potential security risks of using session cookies? (5)
11) How do you update data in a MySQL table using a SQL query in PHP? (5)
12) Why trim () function used in php? "Validations should be performed on both the client and server side". Why? (2.5+2.5)

Model Question-Set-E

Group – 'A'

Attempt any ONE Question. **[10 x 1 = 10]**

1) Write down the PHP script to display data from a database table to a web page in following format. Make your own assumption about database and table name. (10)

Id	Product name	Category	Brand	size

2) Write PHP source code to create multi-dimensional array. Write a PHP program to print the following List in array and display as follows.(4+6)

A. Bachelor in Information Management.
B. Bachelor in Business Administration.
C. Bachelor in Business Studies

3) Write a PHP program to read name and address from a database and display and also to copy content of one text file to another. (5+5)

Group – 'B'

Attempt any SIX questions. **[6 x 5 = 30]**

4) How do you write data to a CSV file in PHP? List any four register global variables.(2+3)
5) How will you display current date in a web page using PHP statement?(5)
6) Is it a good practice to use error suppression in PHP, and why or why not? (5)
7) Why file is used? Explain fgets(), fputs (), file_get_contents() and fread() function with examples.(1+4)
8) Write a PHP program to display the contents of a database. Make your own assumptions abo database.(5)
9) How do you use session cookies in PHP ? How do you delete data from a MySQL table using a SQL query in PHP? (1+4)
10) What is array padding? Give example. Write a PHP program to concatenate a string with a boolean value. (1+4)
11) What does mktime() function do? Create two integer arrays of size 5 each with data in them. Then display sum of all the number of both arrays. (2.5+2.5)
12) Write a program in PHP to store "coding in PHP" in a file named "coding.txt".(5)

Model Question-Set-E

Section A

Attempt any two questions. (2 × 10 = 20)

1. What is a function? How can you define and call a function in PHP? Write a PHP program to implement a function with parameters and return value.[4+6]
2. How can you retrieve form data? Write a PHP program to create a form data that will take a Fahrenheit value as input and displays equivalent Celsius value on submit. The Celsius = (5/9)*(Farenheit-32).[4+6]
3. What are casting operators? Differentiate for from foreach statement. Write PHP program to illustrate use of for and foreach.[2+3+5]

Section B

Attempt any eight questions. (8 × 5 = 40)

4. Write a PHP program to parse a CSV file. [5]
5. Define error handling, error reporting and error suppression. [5]
6. What is session? Write a PHP program for maintaining user data with sessions. [5]
7. Write a PHP program to connect database and retrieve data from a table and display in a page.[5]
8. How can you define class and object in PHP. Illustrate with example. [5]
9. Write a PHP program that will read two input strings in variables fname and lname and display concatenation of fname and lname.[5]
10. How can you define variable in PHP. Illustrate with example. [5]
11. How conversion between array and variables is done? [5]
12. Write a PHP program to illustrate string patterns using regular expression. [5]

Model Question-Set-F

Section A: Long Answer Questions

(Attempt any TWO questions)

[2 × 10 = 20 Marks]

1. Variables and Switch Statement

a) What are variables?

b) How can you define static variables?

c) Write a PHP program to illustrate the use of the switch statement.

(2 + 3 + 5 Marks)

2. String Arrays and Variable Conversion

a) How can you store string-type data in an array?

b) Write a PHP program to illustrate the use of extract() and compact() functions for conversion between arrays and variables.

(3 + 7 Marks)

3. Login Form Implementation
Implement a login form with:

- Username and password fields
- Login and cancel buttons

Requirements:

- Successful login redirects to home.php
- Cancel button clears form fields upon submission

(10 Marks)

Section B: Short Answer Questions
(Attempt any EIGHT questions)
[8 × 5 = 40 Marks]
4. PHP Comments and Basic I/O
a) How are comments written in PHP?
b) Write a program to read name and roll number, then print them with appropriate comments.
(1 + 4 Marks)

5. String Concatenation Function
Write a PHP function concat_strings() that:

- Takes two string arguments ($st1, $st2)
- Returns their concatenation ($st3)

6. Array Slicing
Write a PHP program to extract a subset of an array using array_slice().

7. Anonymous Classes
Describe an anonymous class with a suitable example.

8. Session Handling
Write a PHP program illustrating session starting and ending.

9. Database Querying
Explain how to query a database in PHP.

10. Form Data Retrieval
a) How can you retrieve form data?
b) Illustrate with an example.
(3 + 2 Marks)

11. Error Handling

a) What is an error handler?
b) Write a PHP program using an error handler to format and print errors.
(1 + 4 Marks)

12. JSON File Processing
For the given BIT.JSON file:

```
{
  "Name": "Gunadi",
  "Email": "Gunadi@gmail.com",
  "Dob": "January 1",
  "Age": 30
}
```

Write a PHP program to read and display this information.

Model Question-Set-G

Section A: Long Answer Questions
(Attempt any TWO questions)
[2 × 10 = 20 Marks]
1. Embedding PHP and Control Statements
a) How can you embed PHP code in web pages?
b) Write a PHP program to illustrate the concepts of continue **and** break **statements.**
(3 + 7 Marks)

2. Variables, Parameters, and References
a) Describe variables and missing parameters with examples.
b) Write a PHP program to implement functions containing parameters by reference.
(5 + 5 Marks)

3. Database Connectivity and Forms
a) How can you create a database connection?
b) Create a PHP form with:

- Text field
- Password field
- Radio button elements

c) Write a function to insert the form data into a database table.
(3 + 7 Marks)

Section B: Short Answer Questions
(Attempt any EIGHT questions)
[8 × 5 = 40 Marks]
4. Array Manipulation

How can you remove and insert elements in an array? Write a PHP program using array_splice() for inserting and removing elements.

5. String Comparison

How is the approximate equality of two strings done in PHP? Write a program to demonstrate it.

6. Inheritance in PHP

Write a PHP program to demonstrate the concept of inheritance.

7. Cookies

a) What is a cookie?

b) Write a PHP program to create a cookie.

(1 + 4 Marks)

8. Error Handling

Define error reporting and error suppression with examples.

9. File Handling

Write a PHP program to write to a file.

10. Exception Handling

Write a PHP program to illustrate the use of exception handling.

11. Anonymous vs. Variable Functions

Differentiate between anonymous functions and variable functions.

12. Class Properties and Methods

Write a PHP program to access properties and methods of a class.

Model Question-Set-H

Section A: Long Answer Questions

(Attempt any TWO questions)

[2 × 10 = 20 Marks]

1. Server-Side Scripting and Loops

a) What is server-side scripting?

b) How can you define and declare variables in PHP?

c) Write PHP programs to demonstrate while and do-while loops.

(2 + 3 + 5 Marks)

2. Functions and Variables

a) How can you define and declare functions in PHP?

b) Differentiate between global and static variables.

c) Write a PHP program to demonstrate the use of global and static variables.

(2 + 3 + 5 Marks)

3. PHP Data Objects (PDO) and MySQL

a) What is a PHP Data Object (PDO)?

b) How does the MySQL Object Interface work?

c) Write a PHP program to read data from a database table and display it on a webpage.
(2 + 3 + 5 Marks)

Section B: Short Answer Questions
(Attempt any EIGHT questions)
[8 × 5 = 40 Marks]

4. Array-Variable Conversion
Explain how conversion between arrays and variables is done
using extract() and compact() functions.

5. String Explode and Implode
What is exploding and imploding of strings? Illustrate with an example.

6. Class vs. Interface
How is a class different from an interface? Illustrate with an example.

7. Session Handling
a) What is a session?
b) How can you handle sessions in PHP?
(1 + 4 Marks)

8. Error Handling & Logging
Define error handlers and error logs with examples.

9. File Reading
Write a PHP program to read a file.

10. PHP Configuration Settings
Describe the concepts of:

- display_errors
- variables_order
- request_order

in PHP settings.

11. Date & Time Functions
Describe PHP date-time functions with examples.

12. Constructors in PHP
Write a PHP program to demonstrate the use of a constructor.

END
BEST OF LUCK FOR UR EXAM
