Long question format:

1.Prepare a form that should contain text box for name and email, selection list for country. Write a server side script to store data from the form into database. The script should contain connection to database and appropriate query into the database.

Solution: with practical

Form.php

```
<!DOCTYPE html>
<html>
<head>
    <title>Form</title>
</head>
<body>

    <h1>Form</h1>

    <form method="post" action="process-
form.php">

        <label for="name">Name:</label>
        <input type="text" id="name"
name="name"><br><br>

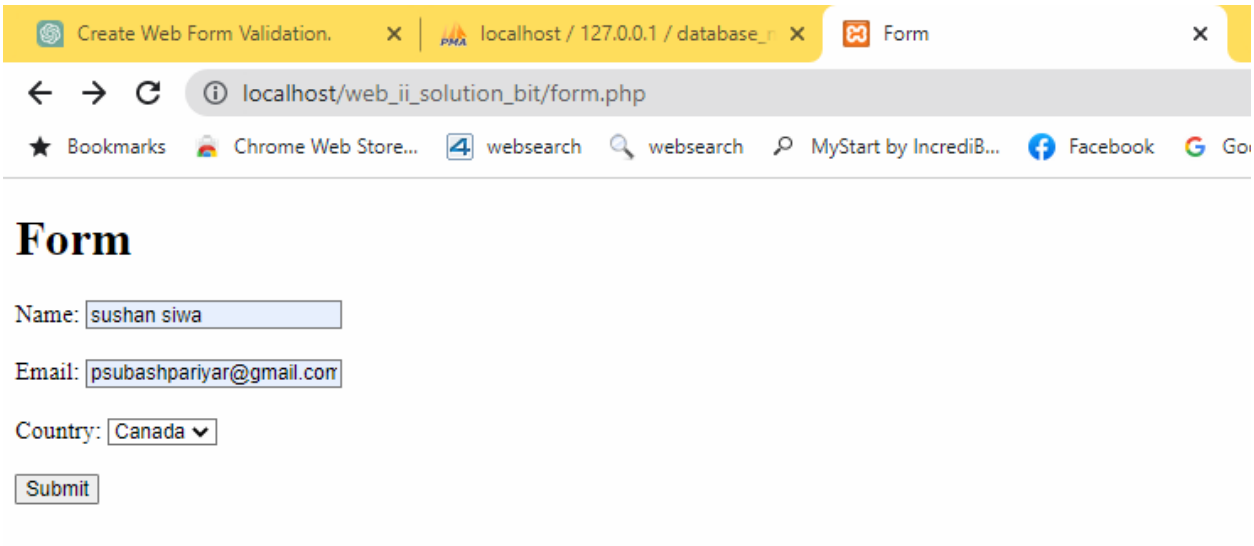
        <label for="email">Email:</label>
        <input type="email" id="email"
name="email"><br><br>
```

```
        <label
for="country">Country:</label>
        <select id="country"
name="country">
            <option
value="USA">USA</option>
            <option
value="Canada">Canada</option>
            <option
value="Mexico">Mexico</option>
            <option
value="Other">Other</option>
        </select><br><br>

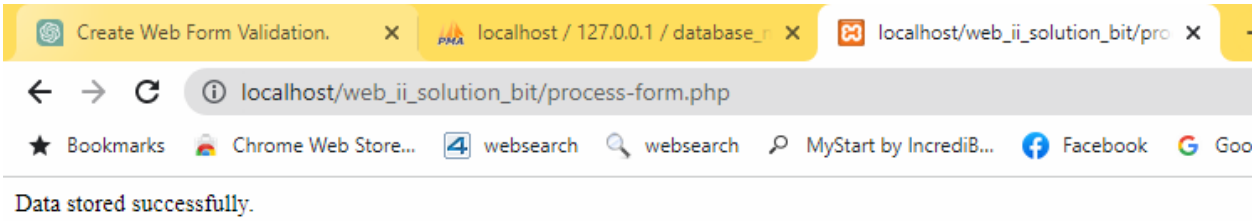
        <input type="submit"
value="Submit">

    </form>

</body>
</html>
```



After



process-form.php

```php
<?php

    // Database connection details
    $servername = "localhost";
    $username = "root";
    $password = "";
    $dbname = "database_name";

    // Create database connection
```

```
    $conn = mysqli_connect($servername,
$username, $password, $dbname);

    // Check connection
    if (!$conn) {
        die("Connection failed: " .
mysqli_connect_error());
    }

    // Get form data
    $name = $_POST["name"];
    $email = $_POST["email"];
    $country = $_POST["country"];

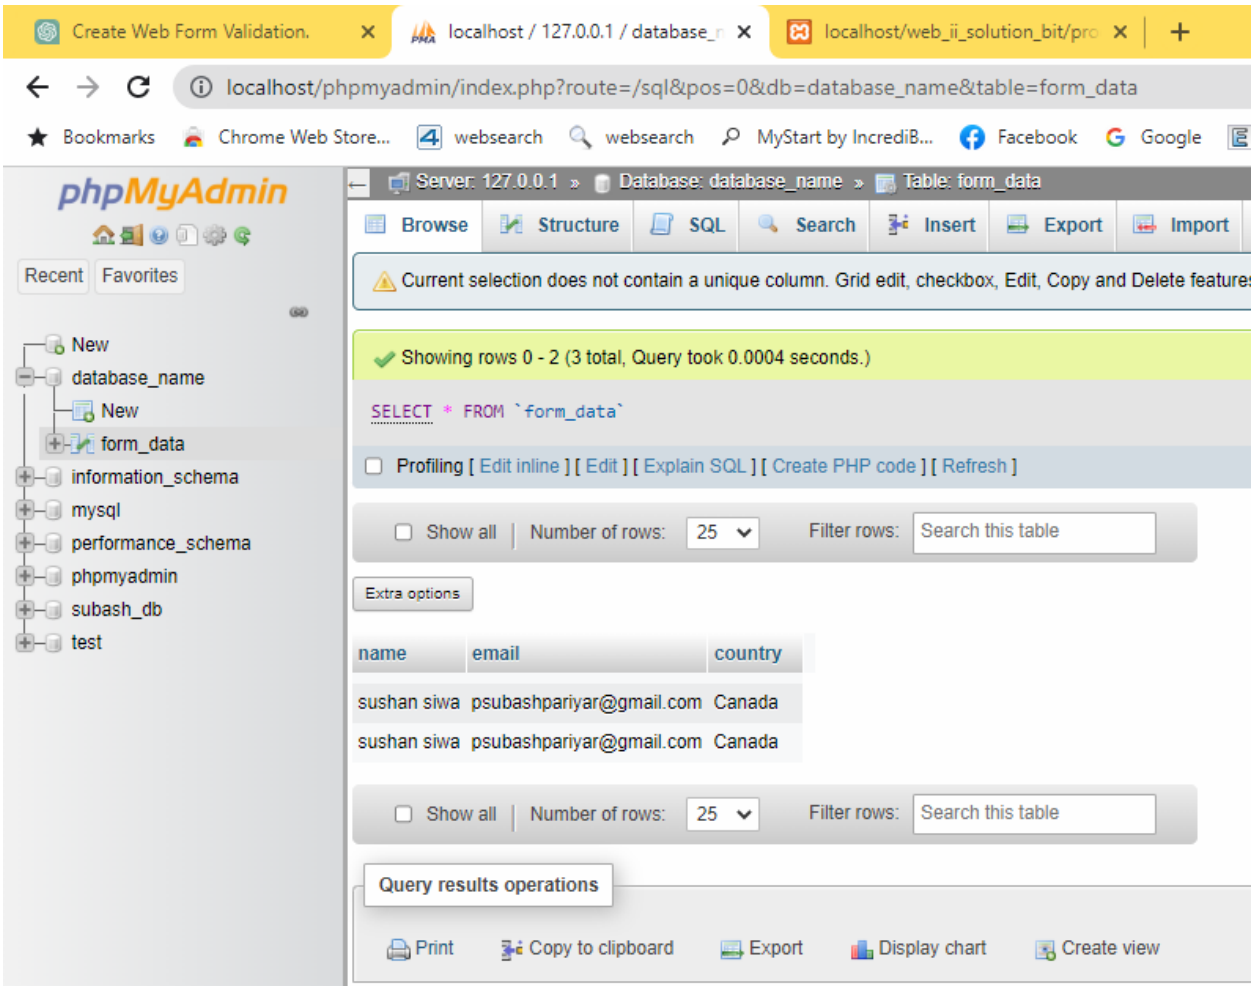
    // Prepare query
    $sql = "INSERT INTO form_data (name,
email, country) VALUES ('$name', '$email',
'$country')";

    // Execute query
    if (mysqli_query($conn, $sql)) {
        echo "Data stored successfully.";
    } else {
```

```
        echo "Error: " . $sql . "<br>" .
mysqli_error($conn);
    }

    // Close connection
    mysqli_close($conn);

?>
```



But you only write two file form.php and process-form.php

2.Create web form for book search catalog. The form should contain a dropdown defining search type, a text box for search keyword, a radio button for download type true or false, now write PHP script to store data from the form into database table and also retrive the results from stored table in a new page.

Search.php

```
<!DOCTYPE html>
<html>
<head>
    <title>Book Search Catalog</title>
</head>
<body>

    <h1>Book Search Catalog</h1>

    <form method="post" action="process-
form1.php">

        <label for="search-type">Search
Type:</label>
        <select id="search-type"
name="search-type">
            <option
value="title">Title</option>
            <option
value="author">Author</option>
```

```
            <option
value="isbn">ISBN</option>
        </select><br><br>

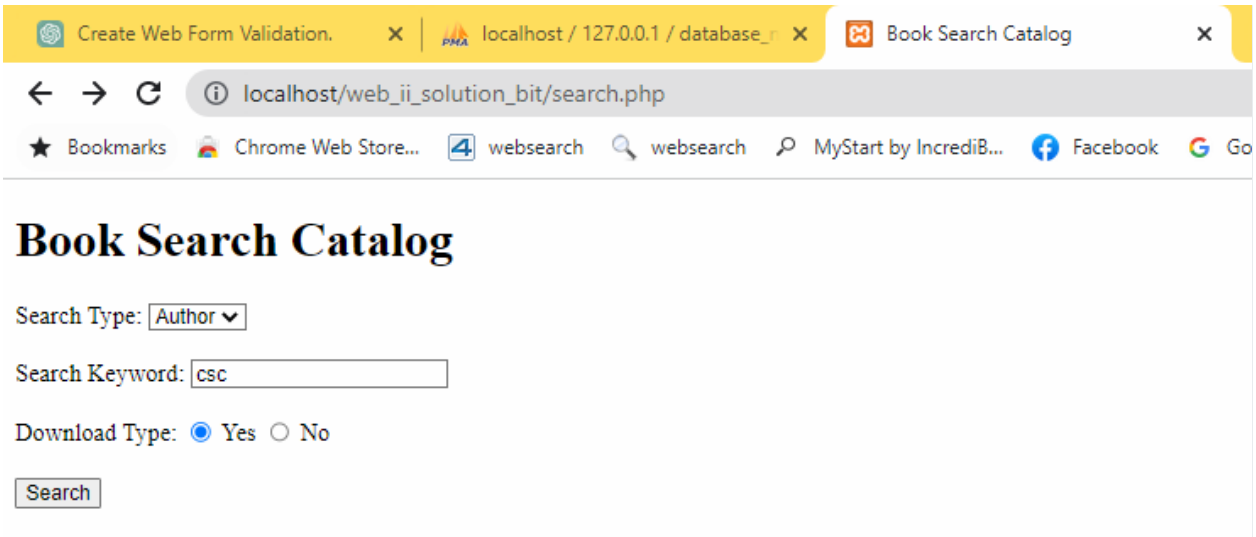
        <label for="search-keyword">Search
Keyword:</label>
        <input type="text" id="search-
keyword" name="search-keyword"><br><br>

        <label for="download-type">Download
Type:</label>
        <input type="radio" id="download-
type-yes" name="download-type" value="yes">
        <label for="download-type-
yes">Yes</label>
        <input type="radio" id="download-
type-no" name="download-type" value="no"
checked>
        <label for="download-type-
no">No</label><br><br>

        <input type="submit"
value="Search">
```

```
    </form>

</body>
</html>
```



process-form1.php

```
<?php

    // Database connection details
    $servername = "localhost";
    $username = "root";
    $password = "";
    $dbname = "database_name1";

    // Create database connection
```

```
    $conn = mysqli_connect($servername,
$username, $password, $dbname);

    // Check connection
    if (!$conn) {
        die("Connection failed: " .
mysqli_connect_error());
    }

    // Get form data
    $searchType = $_POST["search-type"];
    $searchKeyword = $_POST["search-
keyword"];
    $downloadType = $_POST["download-
type"];

    // Prepare query to store form data
    $sql = "INSERT INTO book_search_catalog
(search_type, search_keyword,
download_type) VALUES ('$searchType',
'$searchKeyword', '$downloadType')";

    // Execute query to store form data
    if (!mysqli_query($conn, $sql)) {
```

```
        echo "Error: " . $sql . "<br>" .
mysqli_error($conn);
    }

    // Prepare query to retrieve search
results
    $sql = "SELECT * FROM
book_search_catalog WHERE
search_type='$searchType' AND
search_keyword='$searchKeyword'";

    // Execute query to retrieve search
results
    $result = mysqli_query($conn, $sql);

    // Display search results
    if (mysqli_num_rows($result) > 0) {
        while ($row =
mysqli_fetch_assoc($result)) {
            echo "Search Type: " .
$row["search_type"] . "<br>";
            echo "Search Keyword: " .
$row["search_keyword"] . "<br>";
```

```
            echo "Download Type: " .
$row["download_type"] . "<br>";
            echo "<hr>";
        }
    } else {
        echo "No search results found.";
    }

    // Close connection
    mysqli_close($conn);

?>
```
