Unit 9 - Hosting and Deploying ASP.NET Core Application (Theory & Practical)

Question:

1. Explain the process of hosting and deploying an ASP.NET Core application. Discuss different hosting models such as IIS, Nginx, Apache, and Kestrel. Explain the role of ASP.NET Core Module in IIS hosting, Docker containerization, and publishing an ASP.NET Core application to Azure Cloud.

Perform the following tasks:

1. Explain ASP.NET Core hosting architecture.
2. Discuss different application servers and hosting models:
 - IIS Hosting
 - Nginx Hosting
 - Apache Hosting
 - Kestrel Web Server
3. Explain the working process of ASP.NET Core Module with IIS.
4. Describe the steps involved in deploying an ASP.NET Core application:
 - Building the application.
 - Publishing the application.
 - Configuring the hosting environment.
 - Running the deployed application.
5. Explain Docker containerization for ASP.NET Core applications.
6. Discuss the process of publishing an ASP.NET Core application to Azure Cloud.
7. Prepare a deployment workflow diagram showing:
 - ASP.NET Core Application
 - Kestrel Server
 - IIS/Nginx Reverse Proxy
 - Docker Container
 - Azure Cloud Hosting
8. Document:
 - Hosting models comparison.
 - Deployment procedure.
 - Server configuration details.
 - Docker container workflow.
 - Azure publishing steps.

- Screenshots of deployment and application execution.
